PDF Editor

Editor Feature Documentation

Features of the in-browser PDF editor: edit text, add text and images, highlight, cover, draw, and save as PDF or Word.

Document date	November 2026

1. Overview

The PDF Editor opens a PDF as a stack of rendered pages in the browser. Edits are collected as a list of operations and applied to the real PDF only when you save, so editing is fast and non-destructive. The file is processed on your own computer and is never uploaded to the internet.

Editor toolbar

Control	Purpose
Edit text / Add text / Highlight / Cover / Draw / Image	The six editing tools
Shape, Color, Size	Settings used by the active tool
Undo, Redo, zoom (-, 140%, +)	History and view controls
Save as PDF, Save as Word, Close file	Export and exit
Rotate, Delete page (above each page)	Per-page controls

Design principles

- **Private by design** - no cloud, no tracking, no accounts.
- **Original fidelity** - font, size and colour of edited text are preserved.
- **Reversible** - every change can be undone and redone before saving.

2. Editor Features

2.1 Editing tools

Tool	What it does
Edit text	Click any line of existing text and retype it. The original font, size and colour are kept. Click an added item to select, move or resize it.
Add text	Click anywhere on a page to place a new text box. Supports multi-line text and drag/resize.
Highlight	Drag an area to add a semi-transparent (40% opacity) coloured highlight.
Cover	Drag an area to cover it with a solid box. Solid rectangular covers truly remove the text and image pixels underneath (redaction), so hidden content cannot be copied or reappear in a Word export.
Draw	Freehand pen with adjustable colour and width.
Image	Add one or more images (logos, signatures). Images can also be pasted or dropped onto a page, then moved and resized.
Remove image	Click an existing image to remove it; large images are selected first and removed with Delete. Undo restores it.

2.2 Formatting options

Option	Details
Font family	Sans, Serif or Mono

Option	Details
Style	Bold, Italic, Underline
Size / colour	Text size 1-200 pt (also used as pen width); colour picker
Alignment	Left, Center, Right for multi-line text
Opacity	Text opacity slider (10-100%)
Background	Optional filled background behind text, with colour picker
Shape	Rectangle, Rounded or Ellipse for Cover and Highlight

2.3 Page and view controls

- **Rotate page** - rotates an individual page (available when that page has no pending edits).
- **Delete / Restore page** - mark pages for removal; at least one page must remain.
- **Zoom** - zoom in and out (default 140%).
- **Undo / Redo** - toolbar buttons or Ctrl+Z / Ctrl+Y.
- **Delete key** - removes the selected item; Esc cancels an inline edit or pending image placement.

2.4 Saving and export

- **Save as PDF** - applies all edits and downloads the edited PDF.
- **Save as Word** - applies edits, then converts to an editable .docx (text, tables, images and layout).
- **Close file** - ends the editing session and returns to the tool menu.

Limitations: password-protected PDFs must be unlocked first; scanned (image-only) PDFs have no text to edit because OCR is not performed.
